Note: *You have two hours time to finish. Any behavior of misconduct will be dealth with seriously. That is, anyone caught cheating of any type will receive F in the course and the necessary regulatory actions will be applied to him/her.*

Midterm Exam

Question 6 (30 points)**:** Write a javascript program that takes number of rows and number of columns of a table via a windows prompt and creates a table. The program starts via a button, and fills the table with random integer numbers between 1 and 9.

Question 7 : (30 points): Write a program that will help an elementary school student learn multiplication. Use `Math.random` to produce two positive integers between 1 and 10. It should then display a question such as "What is the multiplication of 7 and 9? ". The student then types the answer into a text field. Your program checks the student's answer. If it is correct, display the string "Very good!", and generate a new question. If the answer is wrong, display the string "No. Please try again.", and let the student try the same question again repeatedly until the student finally gets it right.
